Software Engineer with over 2 years of experience in high-concurrency FinTech and distributed systems. Specialist in React, TypeScript, and Node.js with a focus on platform reliability, performance architecture, and scalable system design. Proven track record in leading cross-functional refactors and engineering robust data strategies for enterprise-grade financial modules.

EDUCATION

•Bachelor of Technology in Information and Communication Technology

2020-24

Dhirubhai Ambani Institute of Information and Communication Technology (DA-IICT)

CGPA: 8.0

EXPERIENCE

•Software Engineer

July 2024 - Present

KFin Technologies Limited (KFintech)

- Pioneered a modular Reducer-Injection framework for 35+ enterprise modules; utilized dynamic code-splitting to achieve an 83% reduction in initial load times.
- Architected a JSON-based Config-Driven UI Engine, standardizing frontend delivery and accelerating feature deployment from 5 days to 1 by eliminating systemic code redundancy across the platform.
- Scaled financial services handling millions of transactions by implementing Redis-based caching and optimizing PostgreSQL query execution plans to ensure high availability.
- Led cross-functional triage for production incidents; built a diagnostic tool using REST API signals to parse encrypted error traces, reducing resolution time from 60 mins to 15.
- Mentored eight junior developers, defining the organization's frontend contribution guidelines and conducting architectural design reviews for new feature modules.

•Software Engineer Intern

January 2024 - June 2024

KFin Technologies Limited / KFintech

- Streamlined investor onboarding systems using the MERN stack; implemented a Unified Testing Strategy using Jest and Playwright that established Automated Quality Gates and improved production stability.
- Validated complex financial logic for NAV and unit calculation modules, ensuring compliance with strict regulatory requirements for decimal precision and idempotency.

•Summer Research Intern

May 2023 - July 2023

Guide: Prof. P S Kalyan Sasidhar / DA-IICT

- Engineered a graph-based pathfinding system in Flutter, utilizing node coordinates and sensor data fusion to achieve 1–2m indoor positioning accuracy.

PERSONAL PROJECTS

•Roommit – Flat and Flatmate Matching Platform

August 2025 - December 2025

A real-time matching platform designed to connect users through habit-based compatibility algorithms.

- Designed a low-latency matching engine using a Python worker service, managing asynchronous state synchronization via WebSockets with sub-100ms interaction latency.
- Deployed containerized environments on AWS (ECS/Fargate), managing resource scaling to maintain platform reliability during concurrent user spikes.
- **Standardized** a reusable component library, ensuring a consistent design system and accessibility compliance across the entire application lifecycle.

•Photography Portfolio Website

September 2024 - May 2025

A dynamic, responsive digital gallery showcasing cinematography and visual storytelling.

- Engineered a high-performance digital gallery using a custom Headless CMS, optimizing asset delivery through skeleton loading and responsive image transformation.

TECHNICAL SKILLS AND INTERESTS

Languages: TypeScript, JavaScript, C++, Python, SQL, HTML, CSS.

Frameworks/Libraries: React, Next.js, Node.js, Tailwind CSS, Redux, WebSockets, Framer Motion.

Tools/Infrastructure: AWS, Git, MongoDB, PostgreSQL, Docker, CI/CD.

Relevant Coursework / CS Foundations: Data Structures & Algorithms, Operating Systems, Object Oriented Programming, Database Management System, Software Engineering.

POSITIONS OF RESPONSIBILITY

•Convenor, Photography and Movie Making Club DA-IICT

2022 - 2024

- Managed a team of 25+ members to conduct various on-site and off-site events

•Core Member, Team i.Fest DA-IICT

2021 - 2024

- An executive member of the Annual Technical Festival under IEEE.
